

## NCS Lab Srl | Company Presentation

**At NCS Lab, we focus on leveraging technology to manufacture and market novel innovations for healthcare and sports medicine, primarily in orthopedics and rehabilitation, that aid our customers in achieving their functional movement goals.**

Our products are the result of close collaboration with specialists and technicians in the medical sector to meet the end user's practical and objective needs.

Our staff of engineers and technicians is comprehensive and highly skilled in every phase of the product's design, development, and testing.

Our experience began more than ten years ago with the development of techniques and tools for use in the arthroscopic and traumatological field, and comes today to focus on creating technological advancements in motion analysis and functional restoration through **Shoulder Pacemaker™** | **Neuralign System & Showmotion:**

**Shoulder Pacemaker™ | Neuralign System:** a therapeutic motion-activated stimulation (MAS) device that employs advanced sensor technology coupled with neuromuscular electrical stimulation (NMES) to aid patients in recalibrating complex muscular movements to restore optimal joint motion and function.

•

**Showmotion:** dynamic tracking and interpretation of joint motion allow clinicians to see even the most minor compensatory movements and alterations in motion, supporting the development of better, more responsive therapeutic and conditioning programs for their patients.

### Newcast Services srl

Via Pola Esterna 4/11  
41012 Carpi  
Tel e Fax: +39 059669813
